

SUMMARY

Senior Software Quality Assurance Engineer with 6+ years of experience in manual and automation testing across web, mobile, API, and banking platforms. Strong hands-on experience in Emirates NBD digital banking programs, including customer onboarding, KYC/AML, CRM validation, CIF/account creation checks, backend data validation, and Finacle/core banking hand-offs. Skilled in building automation suites using Playwright with Node.js, Selenium, WebdriverIO, and Appium, with practical exposure to REST/SOAP APIs, FIXML-style banking integrations, SQL basics, MongoDB validation, Agile delivery, SIT, UAT, regression, and release testing.

WORK EXPERIENCE

SENIOR QA ENGINEER

Nagarro, Dubai

Oct 2022 - Present

- Designed and maintained automated test suites for Emirates NBD's mobile account opening application, reducing regression testing time by 70%.
- Created and executed test cases covering digital onboarding workflows, including Emirates ID/passport OCR, KYC verification, AML compliance checks, document uploads, and customer eligibility validations.
- Performed Finacle/core banking validation support for customer onboarding flows, including CIF/account creation checks, CRM mapping, profile data verification, and downstream banking hand-offs.
- Validated end-to-end functional flows across mobile frontend, backend APIs, MongoDB, CRM, Finacle-related portals, and release environments.
- Built and maintained automation scripts using Playwright with Node.js for backend/API coverage and WebdriverIO + Appium for mobile automation on iOS and Android.
- Performed REST API testing using Insomnia/Postman and supported SOAP/FIXML-style banking integration validations as part of system and regression testing.
- Used Charles Proxy to analyze and validate mobile application traffic, troubleshoot integration issues, and support defect root-cause analysis.
- Worked in Agile delivery cycles with in-sprint automation, SIT, UAT, regression, hotfix testing, defect triage, and production release verification.
- Collaborated with product owners, developers, business analysts, and cross-functional teams to improve product reliability and customer experience.

SQA ENGINEER

OptimusFox, Lahore

Jan 2022 - Sep 2022

- Created SRS documents, UML diagrams, test plans, and detailed test cases for web and SaaS products.
- Created test plans and test cases in Qase.io and Rainforest, and executed functional, regression, and smoke testing cycles.
- Executed test cases, generated status reports, and communicated testing progress to stakeholders.
- Identified, documented, and tracked bugs through Jira until closure.
- Performed API testing via Postman and validated request/response behavior across business workflows.
- Responded to client support queries and reproduced customer-reported issues for defect analysis.
- Assisted in setting up Rainforest automation for repeatable regression coverage.

SQA ENGINEER

Baskt Dev Office, Islamabad

Oct 2019 - Dec 2021

- Created and executed detailed, comprehensive test cases for web and mobile applications.
- Executed system, regression, performance, and stress testing across business-critical modules.
- Developed automation scripts using Selenium for web application testing.
- Collaborated with developers for efficient defect resolution and release readiness.

EDUCATION

BACHELOR OF SOFTWARE ENGINEERING

International Islamic University, Islamabad
2015 - 2019

RELEVANT SKILLS

Finacle / Core Banking: Finacle 11x testing exposure, CRM, Core Banking, Payments, Assets & Liabilities validation, CIF/account creation checks, CRM notes/mapping, FIXML concepts, log/data validation
Automation: Playwright with Node.js, Selenium, WebdriverIO, Appium, framework creation, regression automation
API Testing: REST, SOAP, Postman, Insomnia, backend validation, API automation
Data Validation: MongoDB, SQL basics, data integrity checks, test data verification
Banking Domain: Digital onboarding, KYC, AML, Emirates ID/passport OCR, compliance flows, customer eligibility checks
Tools: Jira, Charles Proxy, Jenkins/CI-CD exposure, Allure reporting, Qase, Rainforest, JMeter
Languages: JavaScript, Node.js, Python, Basic Java

PROJECTS

EMIRATES NBD MOBILE APP

Module: Digital Account Opening using Emirates ID and Passport.

- Performed manual testing for account opening flows and backend validation using MongoDB and banking portals.
- Validated Finacle/core banking hand-offs, CRM/customer data mapping, CIF/account creation checks, KYC/AML status, OCR data capture, and onboarding status updates.
- Conducted API testing via Insomnia/Postman and supported REST/SOAP integration validation for banking services.
- Created automation test suites using Playwright for backend/API coverage and WebdriverIO + Appium for mobile frontend coverage.
- Reported and tracked bugs in Jira; participated in hotfix testing, regression cycles, SIT, UAT, and release sign-offs.

CLOUDHOSTELS (WWW.CLOUDHOSTELS.COM)

A web-based hostel management system.

- Executed manual functional testing for booking, billing, and cancellation features.
- Created detailed test cases and performed cross-browser testing.
- Logged and tracked bugs using Jira.

BASKT GROCERY APP

Grocery and e-commerce platform.

- Conducted manual and automation testing across platforms.
- Used Selenium for automated testing of the web application.
- Created and executed feature-specific test cases and performed UI/UX validation.
- Used Charles Proxy for mobile traffic analysis and Postman for API testing.
- Coordinated with developers to resolve defects and supported UAT cycles.

WAREHOUSE APP

Mobile inventory management solution for physical stores.

- Performed manual testing for order, stock, and compliance modules.
- Wrote test cases for cycle counting, packing slips, and order flows.
- Collaborated with the development team for daily sprint bug verification.

DELIVERY APP

Driver-side delivery tracking and status management.

- Created and executed manual test cases focused on real-time location tracking and order status updates.
- Reported issues via Jira and maintained test logs and documentation.

SUBSCRIPTION FLOW (WWW.SUBSCRIPTIONFLOW.COM)

SaaS subscription billing and customer management platform.

- Developed and automated test cases using Rainforest QA and Qase.io.
- Performed API testing via Postman and UI/UX testing across modules.
- Responded to client support issues and contributed to regression and smoke test cycles.

DEFISPOT

Cryptocurrency exchange platform supporting Bitcoin, Ethereum, and altcoins.

- Performed functional testing for asset swapping, trade execution, and blockchain transaction recording.
- Tested wallet integrations and ensured smooth performance for beginner and advanced users.
- Validated smart contract activity and secure user interactions across trading flows.

DINISIUM

Blockchain-based investment platform for retail investors.

- Tested portfolio diversification tools, risk profile integrations, and blockchain-backed transaction reliability.
 - Ensured security compliance, transaction traceability, and UI/UX smoothness for investment management.
 - Collaborated with blockchain and frontend teams to ensure accurate execution paths and ethical investing workflows.
